

*Cascade Forks – A Tradition Of Quality*

# Quality Forks When You Need Them

## Over 60 years of Quality, Expertise and Professionalism

Over the last few decades, the field of materials handling has developed into a highly sophisticated and vital part of all industries. Cascade has played a significant role in this growth from our beginnings as a small machine shop in the early

1940's to the leading global manufacturer that we are today, Cascade continues to grow as the premier supplier of lift truck forks, attachments and associated products.

## Manufacturing efficiency coupled with global production

Cascade operates state-of-the-art fork plants in seven locations worldwide: Germany, France, UK, Italy, Canada, USA and China. Forks are produced in capacities up to 60 tons in many section sizes, lengths and mountings. High quantities, efficient production processes and global availability allow us to react to customer requirements with flexibility and speed with no compromise to the highest quality levels.

## Top Quality Forks – Worldwide

Only fully tested and approved materials are used in the manufacture of Cascade forks. Guaranteed materials together with fully controlled processes result in forks that meet or exceed all national and international standards (such as ISO2328 and ISO2330 and ANSI ITSDF B65.11.4-2005) with regards to mounting details, load-, fatigue- and impact-tests.

Every Cascade fork is crack tested on all welds and in the critical heel area, while our global quality system offers full traceability throughout the entire production history of each fork manufactured, from raw material through to final inspection. Each fork is stamped with manufacturer's identification, specified capacity and load centre, week of manufacture and production works order number. This traceability together with our strictly controlled processes, ensure that only forks of the highest quality reach out customers.

***Fast Lead Times... Highest Quality***

### **Product Innovation – Designed by Cascade**

Cascade's lock pin assembly is evidence of our commitment to continually strive for product improvements that deliver benefits to the industry. The design ensures ease of fitting and movement of forks across the carriage while the "lift and twist" ergonomics of the pin kit provides a much more definitive "go/no-go" engagement of the pin into the carriage. This design also ensures the lock pin assembly hole in the hook is permanently sealed against dirt, grease and other contaminants reducing the possibility of the pin becoming inoperable. The geometry of the top hook, together with more defined weld contact areas between the sides of the hook and the back of the fork, offer greater strength and resistance to side forces. The correlation of hook and fork widths allows for easier and safer movement and storage of forks on pallets.

### **Give Us A Call – We're Ready To Help!**

For professional and experienced advice, contact our sales department today. We are committed to finding the best solution for your requirements. We look forward to hearing from you.

# The Complete Line of Forks Available From Cascade

## A Solution For Any Application

Cascade offers a wide range of standard forks, together with customized design specifications, stainless steel forks, clad forks, fork extensions – a solution for any application.

Standard FEM/ITA Fork

Pin-Type Fork

Bolt-On Fork

Hydraulic Attachment Fork

Quick Disconnect Fork

Stainless Spark Resistant  
& Rust Free Forks

Lumber Fork

Inverted Fork

Folding Fork

Boom & Carpet Pole

Cladded Forks

Fork Extensions
