

22H-24H Swing Frame Paper Roll Clamps

Frequently Asked Questions

1. Q: What is a Swing Frame Paper Roll Clamp?

A: A Swing Frame Paper Roll Clamp offers a high level of flexibility through the ability to shift or “swing” the arm frame of the attachment. It acts much like a human wrist to shift paper rolls laterally.

2. Q: Why would I use a Swing Frame Paper Roll Clamp?

A: Swing Frame Paper Roll Clamps:

- Allow for easy lateral positioning of paper rolls.
- Provide improved handling in tight stacking locations such as rail boxcars and truck trailers.
- Eliminate the need to reposition the truck for a straight on approach to the paper roll; the swing frame does the adjusting.
- Have a short arm/long arm configuration that provides ease of handling in the horizontal (bilge) position.
- Have clamp arms that can be positioned to equal arm configuration when needed.
- Allow the lift truck operator to choose the best arm configuration and clamp orientation for the job.

3. Q: What are the differences between the 22H-24H Swing Frame Paper Roll Clamps & the 22H-24H Fixed Frame Paper Roll Clamps?

A: The basic features are the same for both with the exception of swing frame capability.

Both versions have the outstanding features associated with the H-Series Paper Roll Clamps including:

- Improved specifications and reduced weight compared to previous clamp model(s), with no loss in durability.
- Thin arm profile with exceptional visibility through the arms.
- Improved arm and rotation speed.
- Springs align pad to arm for clamp ready pad orientation.
- Improved hinge pin durability and decreased pad wear.
- Enhanced drive box durability.
- Improved pad link attach point durability.

4. Q: How do the 22H & 24H Swing Frame Paper Roll Clamps fit into the H-Series product family?

A: The 22H Swing Frame model replaces the 45F Swing Frame. As with the 24H Fixed Frame model, the 24H Swing Frame represents a new capacity model that will bridge the gap between the 22H and 25H with a lighter weight clamp to help maximize capacity on 3T and 3.5T trucks.

5. Q: Are there any other details that I should be aware of?

A: Yes. The 22H-24H Swing Frame Paper Roll Clamps:

- Come with the Herringbone pad as standard but other pad options are available (*see the Cascade Contact Pad Guide for further options*).
- Are available in split arm configuration.
- Can be configured with a fixed short arm.
- Are available in 0° and 2° mounting.
