

# Over 370 Years of Tradition

Booforge Steel has a long tradition – it was back in 1646 that it all began, with genuine open die forging in the Swedish town of Karlskoga. The forging business continued for many years within Alfred Nobel's well-known company Bofors.

This longevity has given Booforge Steel the ability to cultivate unmatched materials expertise and the highest standards of quality. We're currently a leading player in its product areas: lifting forks (Fork) and free-form forging (Form).

## **Forks**

Booforge Steel is one of the world's leading manufacturers of custom and large lift truck forks. With lifting capacities up to 150 tonnes, our forks are ideal for demanding applications that require extreme strength. Our success is largely due to our own unique, high-quality material – a material whose development is the result of many years of experience.

The material, combined with our skill in treating it and in manufacturing lifting forks adapted to every customer's specific requirements and wishes, give us a unique and well-earned position on the market.

The product range also includes various accessories and a number of standard forks.

## **Form**

Rarely has the term "Made in Sweden" been more appropriate to use. That is exactly what you get when you engage us for your free-form forging. All of our products are forged in Sweden and the work is done by skilled professionals. They have long experience and extensive knowledge in free-form forging, particularly for applications requiring complex shapes, small series and extreme strength.

# Solutions with Strength

## ***Fork Manufacturing***

We specialise in producing customised fork blanks or complete welded lifting forks, and in addition to welding our finishing process includes machining, testing, blasting, and painting, depending on our customers needs.

We offer a broad range of high-quality materials for lifting forks, with a particular focus on R0 651. When extra high yield strength is required, we use HRO 774. These unique materials allow for thin fork profiles that offer extreme strength. Customers can also make special arrangements for lifting forks in stainless steel or other steel grades.

Fork Products Include:

- Large forks with capacities up to 150 tons
- Quarry Forks
- Inverted Forks
- Terrain Forks
- Custom forks

We also offer fork carriers upon request.

All work is carried out within the framework of our quality system, which is certified in accordance with ISO 9001:2015 and ISO 3834-2.

## Free Form Forging

Forged onsite, the materials included in our free form forging include low alloy steel, stainless steel, aluminum, titanium and more. We can handle piece weights anywhere from 10 to 3.000 kilos.

Whatever we forge, you can always expect a quality job, secure deliveries of both small and large series, as well as personalized and flexible customer support. **At Booforge Steel, our customers come first and we will work closely with you to make sure we meet your requirements.**
