

Construction Attachment Division

The Cascade Construction Story

CASCADE CORPORATION is the world leader in designing and manufacturing material handling equipment, using a unique combination of manufacturing concepts to achieve high levels of productivity and quality. This expertise has set the field for our entry into the construction attachment business.

Cascade manufactures an assortment of construction attachments for your excavator, wheel loader, skid steer or telehandler. By partnering with innovative and dependable construction attachment manufacturers like PSM, American Compaction Equipment, and Wedgelock, Cascade is building a new generation of high quality and versatile attachments for heavy duty industries: construction, logging, recycling, demolition, and more.

By focusing on the customer instead of the process we're able to dominate the market in speed, cost management and customer service.

A Division of Cascade Corporation

Since 1983, PSM has developed a strong reputation for product innovation, quality and durability. These values made PSM a great fit for Cascade when the Woodinville, Washington-based company was acquired in 2006. Now, in conjunction with American Compaction Equipment, Inc. and Wedgelock, PSM LLC serves as the cornerstone of Cascade's construction attachment business.

Progressive link thumbs, heavy duty buckets, continuous rotating grapples, free hanging and rotating clamshells are just a few of the items manufactured for your

excavator or wheel loader to maximize performance in a variety of applications. The experienced sales and engineering staff at PSM is always ready to assist in analyzing your particular product challenges.

AMERICAN COMPACTION EQUIPMENT INC.

American Compaction Equipment, Inc. (ACE) first opened for business in 1987 and continues today to deliver quality compaction products at an affordable price. Located in Lake Elsinore, California, ACE provides fast service and technical knowledge for addressing your compaction needs.

In 2007, ACE joined the Cascade Corporation team, marking a significant acquisition in Cascade's efforts to bring its brand of innovation and quality service to the construction industries.

ACE produces a wide range of compaction wheel models to allow for machine-specific application and proper tool-to-machine combination.

Wedgelock Quick Couplers have a unique and constant locking principle. High-strength construction increases wearability and reduces weight, maximizing product performance and reliability. The Wedgelock low-profile design ensures optimum breakout force and power at the bucket tip. Hydraulic and Manual Quick Couplers for Excavators and Backhoe Loaders anchor the Wedgelock product range. The well-respected I-Lock™ Coupler system offers superior levels of performance and safety.

In January, 2012, Cascade acquired the rights to sell Wedgelock products in North America and produce Wedgelock products in their U.S. factories. Construction equipment Dealers and Operators throughout North America have made the Wedgelock Coupler their primary choice. The addition of the Wedgelock product provided an important expansion to Cascade's line of construction attachments, offering an excellent complement to the Buckets, Thumbs, Grapples and Soil Compaction products offered by the Cascade group of companies.

DEPENDABILITY YOU CAN COUNT ON
